- High Security Enclosures
- Tenant Box Rekeying

Prevent Mail Theft

Our mailbox enclosures are constructed with all welded steel framing with a perforated steel face and can be powder coated in a variety of colours. The door-inside-a-door design gives both tenants and postmen easy access to the mailbox station via Canada Post's crown lock on the outer door, and a high security lockset for tenants on the inner door. **And we take care of all the logistics with Canada Post.**

Each enclosure is custom built to fit the size of your mailbox station and the installation surroundings. Each enclosure features anti-pry door astragals, heavy duty lock guards, and high security hinges for maximum protection.

Mailbox Gazebo Gates

For mailboxes installed inside gazebos, we can build security bars and gates to protect the entire area from vandals and thieves.

Your custom enclosure can include features such as Canada Post crown lock, lexan facing for additional security, commercial grade hydraulic door closers, and keying to your building master.

Lobby Mail Rooms

Your interior mail rooms can be secured using our door-in-door design, allowing Can Post to enter using their crown key, and residents with a separate mail room key.

Security Features Built into Every Enclosure

Standard features we build into every enclosure include:

- Full height anti-pry astragals on the doors
- Lock guards
- Non-removable pin hinges
- Spring latch (just close the door to lock)
- All welded steel construction
- Enclosed mounting points

For interior lobby mailboxes, we can also add decorative wood or mirror paneling to enclosures. Blending in with the surroundings brings added security benefits as well as aesthetics.
